# SSNAP Clinical Executive Summaries – Thames Valley

# An overview of hospital stroke care quality up to November 2016

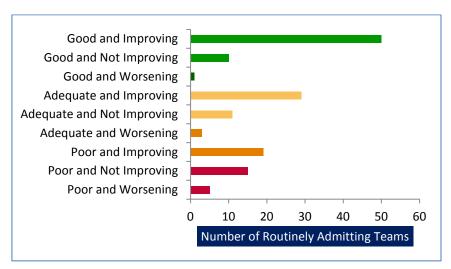

The Sentinel Stroke National Audit Programme (SSNAP) is the National Clinical Audit for Stroke and the main source of stroke data in the NHS. Data is collected on every stroke patient admitted to hospital in England, Wales and Northern Ireland.

This regional pack contains an overview of the hospitals' overall SSNAP score performance in a series of graphs charting the change in score over time for each hospital. The overall SSNAP score is a composite score combining the achievement on 44 care process measures derived from National Clinical Guidelines for Stroke and adjusted for case ascertainment and audit compliance. The 44 key indicators are grouped into 10 domains of care. The change over time in this overall score has been summarised in two ways:

- Performance over the whole two and a half year period has been characterised as
   Improving, Not Improving or Worsening depending on the slope of a trend line plotted
   through all the hospital's scores at every time point.
- Recent performance has been characterised as Good, Adequate or Poor depending on where the trend line meets the latest time period.

This regional pack also contains the individual executive summaries of the stroke care provided by the hospitals in this region between April 2014 and November 2016. These executive summaries highlight areas of good, adequate and poor performance in order to identify key areas to draw up action plans for improvement. Further information on resource use for stroke is given including activity, length of stay, cost of stroke and admissions to care homes after stroke. The SSNAP website has a range of additional tools to help drill down deeper into the data and identify ways to improve.

Nationally, it is encouraging to see that most teams are "Improving", though there are a number of teams who are consistently not achieving "Adequate" scores, and it is concerning that performance within a few services appears to be deteriorating.

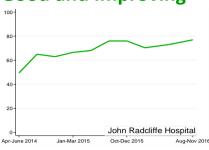

Distribution of categories for all hospitals which routinely admit stroke patients in England, Wales and Northern Ireland

#### John Radcliffe Hospital - SSNAP Executive Summary

The Sentinel Stroke National Audit Programme (SSNAP) is the National Clinical Audit for Stroke and the main source of stroke data in the NHS. Data is collected on every stroke patient admitted to hospital in England, Wales and Northern Ireland. This is a summary of the stroke care provided by this hospital over the last two and a half years highlighting areas of good, adequate and poor performance. It should be shared with everyone involved in developing and providing stroke care in this hospital, including the non-executive team and managers, in order to draw up action plans for improvement. The SSNAP website has a range of additional tools to help drill down deeper into the data and identify ways to improve.

# Overall SSNAP score performance from April 2014 to November 2016

Performance recently has generally been:

Good

This hospital's performance over the two and a half years has generally been:

**Improving** 

Performance in key indicators of care quality over the past year			
Mainly LOW scoring domains (D or E average):	Mainly ADEQUATE domains (C average):	Mainly GOOD domains (A or B average):	
Discharge Processes	Stroke Unit Specialist Assessments Speech and Language Therapy	Scanning Thrombolysis Occupational Therapy Physiotherapy Multidisciplinary Team Working Standards by Discharge	
**areas to focus quality improvement on, as require substantial improvement	**areas where further improvements are still needed.	**areas to celebrate success, maintain performance and identify whether further improvements are feasible.

### John Radcliffe Hospital - SSNAP Executive Summary

#### Activity and length of stay

In August-November 2016 this hospital treated 196 patients, of which:

195 patients were first admitted to this hospital 1 patient was transferred in from another hospital

Length of stay:	For all routinely admitting teams		For patients
	nationally	team	discharged/transferred alive from
			this team
	N=27,507	N=196	N=168
0-3 days	40.3% (11,087 patients)	50.0% (98)	50.6% (85)
4-7 days	20.3% (5,580 patients)	23.0% (45)	23.8% (40)
8-21 days	21.4% (5,886 patients)	24.0% (47)	23.8% (40)
22-30 days	5.3% (1,446 patients)	2.6% (5)	1.2% (2)
31+ days	12.8% (3,508 patients)	0.5% (1)	0.6% (1)
Mean	14.0 days	6.3 days	5.9 days

#### **Cost of stroke**

These costs have been derived from the SSNAP health economic model. This estimates the average cost of stroke according to patients' age, sex, stroke type and stroke severity. NHS costs include acute treatment costs, bed stays, inpatient and post-discharge rehabilitation, drug prescribing and follow up GP and hospital visits. Social care costs include the costs of nursing home admission and packages of care. They are not the costs for a specific hospital, but the average cost across all providers. The model explored the cost effectiveness of two evidence-based interventions for acute stroke patients; thrombolysis and discharge with Early Supported Discharge. Both of these interventions are appropriate for a subset of acute stroke patients.

Thrombolysis	Your current thrombolysis rate	13%
Cost Savings	Thrombolysis rate at top 20 performing units	20%
over 5 years:	Average NHS cost saving by thrombolysing 1 more eligible patient	£4,100
	Average social care cost saving by thrombolysing 1 more eligible patient	£6,900
	Overall average cost saving by thrombolysing 1 more eligible patient	£11,000
	Average quality-adjusted life-years gained by thrombolysing 1 more eligible patient	0.26 QALYs
<b>Early Supported</b>	Your current rate of discharge with ESD	33%
Discharge (ESD)	Rate of discharge with ESD at top 20 performing units	60%
Cost Savings	Average NHS cost saving by discharging 1 more eligible patient with ESD	£1,600
over 5 years:	Average social care cost saving by discharging 1 more eligible patient with ESD	£8,700
	Overall average cost saving by discharging 1 more eligible patient with ESD	£10,300
	Average quality-adjusted life-years gained by discharging 1 more eligible patient with ESD	0.14 QALYs

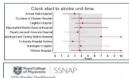

#### Admissions to care homes after stroke

Nationally, 7.0% of patients discharged alive from inpatient care between August-November 2016 were newly institutionalised into a care home for the first time upon leaving hospital. This compares to 3.7% (6/161) for patients treated by this hospital and discharged from inpatient care either by this hospital or another hospital.

Dec. 2014

Performance in key indicators of care quality over the past year			
Mainly LOW scoring domains (D or E average):	Mainly ADEQUATE domains (C average):	Mainly GOOD domains (A or B average):	
Scanning Stroke Unit Thrombolysis Specialist Assessments	Multidisciplinary Team Working	Occupational Therapy Physiotherapy Speech and Language Therapy Standards by Discharge Discharge Processes	
**areas to focus quality improvement on, as require substantial improvement	**areas where further improvements are still needed.	**areas to celebrate success, maintain performance and identify whether further improvements are feasible.	

For further information about performance in different domains of care and scoring methodology, visit our results portal:

#### **Wexham Park Hospital - SSNAP Executive Summary**

#### Activity and length of stay

In August-November 2016 this hospital treated 123 patients, of which:

109 patients were first admitted to this hospital 14 patients were transferred in from another hospital

Length of stay:	For all routinely admitting teams nationally	For all patients treated at this team	For patients discharged/transferred alive from
	N=27,507	N=123	this team N=101
0-3 days	40.3% (11,087 patients)	26.8% (33)	28.7% (29)
4-7 days	20.3% (5,580 patients)	24.4% (30)	23.8% (24)
8-21 days	21.4% (5,886 patients)	23.6% (29)	20.8% (21)
22-30 days	5.3% (1,446 patients)	11.4% (14)	13.9% (14)
31+ days	12.8% (3,508 patients)	13.8% (17)	12.9% (13)
Mean	14.0 days	17.0 days	16.5 days

#### **Cost of stroke**

These costs have been derived from the SSNAP health economic model. This estimates the average cost of stroke according to patients' age, sex, stroke type and stroke severity. NHS costs include acute treatment costs, bed stays, inpatient and post-discharge rehabilitation, drug prescribing and follow up GP and hospital visits. Social care costs include the costs of nursing home admission and packages of care. They are not the costs for a specific hospital, but the average cost across all providers. The model explored the cost effectiveness of two evidence-based interventions for acute stroke patients; thrombolysis and discharge with Early Supported Discharge. Both of these interventions are appropriate for a subset of acute stroke patients.

Thrombolysis	Your current thrombolysis rate	0%
Cost Savings	Thrombolysis rate at top 20 performing units	20%
over 5 years:	Average NHS cost saving by thrombolysing 1 more eligible patient	
	Average social care cost saving by thrombolysing 1 more eligible patient	£6,900
	Overall average cost saving by thrombolysing 1 more eligible patient	£11,000
	Average quality-adjusted life-years gained by thrombolysing 1 more eligible patient	0.26 QALYs
<b>Early Supported</b>	Your current rate of discharge with ESD	45%
Discharge (ESD)	Rate of discharge with ESD at top 20 performing units	60%
Cost Savings	Average NHS cost saving by discharging 1 more eligible patient with ESD	£1,600
over 5 years:	Average social care cost saving by discharging 1 more eligible patient with ESD	£8,700
	Overall average cost saving by discharging 1 more eligible patient with ESD	£10,300
	Average quality-adjusted life-years gained by discharging 1 more eligible patient with ESD	0.14 QALYs

#### Admissions to care homes after stroke

Nationally, 7.0% of patients discharged alive from inpatient care between August-November 2016 were newly institutionalised into a care home for the first time upon leaving hospital. This compares to 4.9% (5/103) for patients treated by this hospital and discharged from inpatient care either by this hospital or another hospital.

www.strokeaudit.org/results

- O Data on stroke care quality for all services in England, Wales and Northern Ireland
- O Regional slideshows and Easy Access Versions
- o Reporting outputs for Clinical Commissioning Groups (CCGs) in England and Local Health Boards (LHBs) in Wales
- O Information about patient outcomes (30 day all cause mortality and AF outcomes)
- Data about **patient characteristics** (e.g. AF, age profiles)
- O Nationally benchmarked data on how effectively stroke services are **organised** (e.g. **staffing levels**, acute care **protocols** and provision of specialist services)
- O Interactive root-cause analysis tools for to help to speed up thrombolysis and intra-arterial intervention times (requires log-in)
- O Detailed data on the **costs of stroke**, and the **costs and benefits** of improving thrombolysis and Early Supported Discharge
- $_{
  m O}$  Interactive maps, infographics and dashboards.
